Listing Categories

Add New Listing Category 2

Singular Form *

The singular form of the category name.

Plural Form *

The plural form of the category name.

URL Slug

The URL safe slug of your listing category, can only contain alphanumeric characters or a dash.

Compare Value =

Change the way the value is compared, useful for numbers (price, mileage, fuel economy).

Is Number 3

Set this category as a number value.

Filterable 4

Make this category display in filterable spots.

Range

This will display a range control instead of a dropdown for number categories on the inventory page.

Range Increment

This will determine how much to increment the range slider by.

Currency

Check this box if the current category is a currency or price.

Use On Listing 5

Make this category show on the listing information (5/10).

Hide Listing Category

Check this box if you want to hide the listing category on the single listing page sidebar.

Show Amount

Check this box if you want the amount of listings in this category displayed in dropdown menus on the frontend.

Show Column

Show this listing category as a column under the listings post type.

Multiple Location Emails

Adds the ability to specify different email addresses on a per location basis for contact forms.

Link Value None

Choose a value that you want to link values with.

Sort Terms Ascending

Choose what order the terms will be ordered in.

Schema Value None

Choose what format this value will be in according to [Vehicle Schema](#).

6 Add New Listing Category

1 – Para crear una nueva característica en los vehículos hay que acceder a la sección Listings >> Listing Categories

2 – Ponemos el nombre en inglés tanto en singular como en plural (revisar previamente que estamos en la versión en inglés del gestor).

3 – Si el nuevo campo es un número, podemos seleccionar esta opción.

4 – Si queremos que está característica aparezca como campo en el buscador de vehículos, seleccionaremos esta opción.

5 – Si queremos que esta nueva característica se vea en el listado de vehículos, seleccionamos esta opción.

6 – Por último clicamos sobre el botón “Add New Listing Category”

[Save Order](#)[Delete All Listing Terms](#)[Listing Meta Description \(SEO\)](#)

Customize the meta description search engines use with dynamic values that are set on each listing.

[Regenerate Frontend Terms](#)

Notice missing terms on your frontend? Click the button below to regenerate them and have them show up. If you use a custom import plugin you will need to run this in order for the terms to appear.

[Register WPML Terms](#)

Notice missing terms in WPML? Click the button below to force register them in WPML.

[Delete Unused Listing Terms](#)

Delete any unused terms for all of your listing categories. This applies only to the backend, by default any unused terms are hidden on the frontend category filters of the website.

7

7 – Una vez creada la nueva característica, hay que registrarla en WPML

The screenshot displays the WPML String Translation interface. On the left sidebar, the 'String Translation' menu item is highlighted with a red box and the number 8. The main content area shows a search for 'Transmission' (highlighted with a red box and the number 9) in the 'Listing Categories' domain. The search results table has a red box around the 'Listing Categories' entry, and a red arrow points from the edit icon in that row to a translation window (labeled 11). The translation window shows the original text 'Transmission' and the translated text 'Transmisión' (labeled 10).

Domain	Name	View	String	
MergePress			transmission	+
Listing Category Terms	Listing Category Term: Manual Transmission		Manual Transmission	
Listing Categories	Listing Category: Transmissions		Transmissions	
Listing Categories	Listing Category: Transmission		Transmission	

8 – Acceder a WPML >> String Translation

9 – Escribir el término/característica que acabamos de crear y clicar en “Search”

10 – En los resultados que aparece, buscar el que pone “Listing Categories” en la columna de Domain y clicar sobre el icono. Aparece un símbolo “+” o un icono de lápiz según si exista la traducción.

11 – En la ventana que se abre, escribir la traducción. Clicar fuera de la caja para salir y ya se habrá creado.
